Novelties and Specialties for 1922

ON the following few pages we are pleased to suggest to you a few of the newer varieties of Vegetables, also some particularly good or improved strains of the standard sorts which we have selected from nearly three thousand field trials at our Seed Farms at Orange, Conn.

S. D. Woodruff & Sons' Special Strain of Refugee 1000 to 1 Beans

Bean growers will be glad to know that we have succeeded in our efforts to develop an ideal dependable strain of **Refugee 1000-1**. This strain produces plants of healthy, robust growth, about 15 inches high, of absolute true branching bush growth. The pods are round, long and slim, of light green color, fleshy, solid and brittle, of tender and mild flavor. **Pkt. 15c., lb. 40c., 100 lbs. \$18.00.**

S. D. Woodruff & Sons' Special Strain Black Valentine

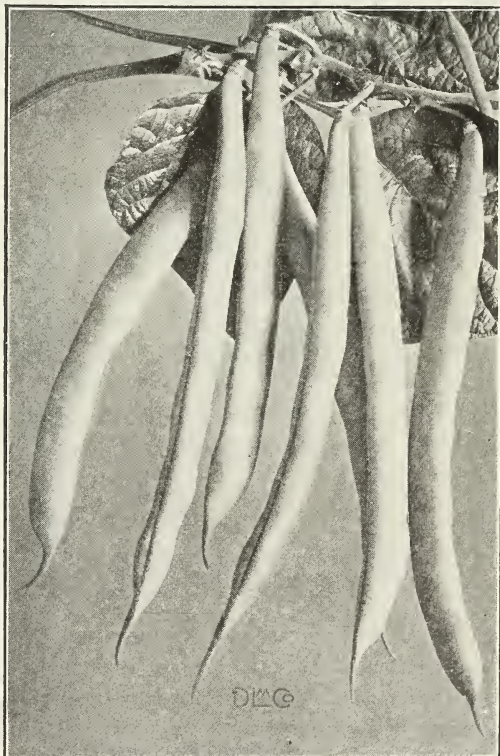

This strain will be found exceedingly valuable to market gardeners and especially those who are located a distance from market. A good shipper and an enormous yielder of extra long, round, straight and tender soft green colored pods.

This strain has been developed to meet market gardeners requirements. The supply is limited—get your order in early. **Pkt. 15c., lb. 40c., 100 lbs. \$20.00.**

S. D. Woodruff & Sons' Special Strain of Hodson Wax

Our Strain of Hodson Wax has been bred for quality, productiveness, plus absolute freedom from bean diseases. In the years we have been growing this strain not a trace of blight or mildew has ever appeared on a plant or pod in our fields. It has outyielded any other Wax Podded Bush Bean two to one on a given area. The plants often grow to 2½ feet in height, bearing enormous quantities of pods 7 to 8 inches in length of a perfect color.

Market gardeners will do well to plant this strain of Hodson Wax because of its phenomenal vigor, freedom from bean diseases, and productiveness. **Pkt. 15c., lb. 40c., 100 lbs. \$18.00.**

Brittle or Round Pod Kidney Wax—Entirely Stringless

Onions, Southport White Globe. 800 bushels per acre

Woodruff's Selected Southport White Globe Onion Seed

Hundreds of growers of Fancy White Onions come to us each year for their seed supply of the famous Southport White Globe Onion. We take great pains to have our stock of this Onion of such quality as to add each year to our list of customers. Those who order this year will receive seed of exceptional quality, as the crop is of unusually strong vitality and fully up to the standard of quality we always seek to maintain. **Pkt. 10c., oz. 50c., $\frac{1}{4}$ lb. \$1.00, lb. \$2.50, 10 lbs. and over, \$2.25 lb.**

The Famous New Knight Stock

Yellow Globe Danvers Onion

It is the finest strain of Globe Danvers Onion ever grown. It is of elegant Globe type; the best keeper of all Onions for storage purposes. It has a very hard outer skin. It cures a deep yellow color, and grows to an unusually large size. This stock is very limited, being nearly sold out as this book goes to print. Every Onion grower should try this new strain. **Pkt. 10c., oz. 35c., $\frac{1}{4}$ lb. 75c., lb. \$2.50, 10 lbs. and over, \$2.00 lb.**

Early Wonder Beet

The Beet that beats them all. This wonderful Beet is so popular with our thousands of customers that for the past two seasons the entire crop was sold long before the end of the season. The earliest, most perfect shaped, finest appearing bunch Beet in the market; beautiful dark color, small top, single small tap root, excellent keeper, truly the ideal Beet. Used not only as a bunch Beet but grown extensively for late fall sowing because it grows two weeks quicker than any other Beet worth while. Every Beet grower needs this Beet. **Pkt. 10c., oz. 25c., $\frac{1}{4}$ lb. 50c., lb. \$1.25.**

"Early Wonder" Beet

Woodruff's New Long Danvers Carrot

Note that this is distinct from the Half-Long Danvers. Possessing every feature of that popular variety, this new Carrot is nearly twice its length. It is as bright in color as the deepest Long Orange. It is extremely smooth and well formed.

In the districts where Carrots are marketed in boxes, two across will fill a bushel box. In length it is between a Danvers and a Long Orange. It is blunt in growth with very small tap root, smoother than any other Carrot grown. It goes to you with our hearty recommendation. **Pkt. 10c., oz. 30c., $\frac{1}{4}$ lb. 75c., lb. \$2.00.**

Lettuce "Big Boston"

Big Boston Lettuce

S. D. Woodruff & Sons'
Selected Strain.

We believe that this is the surest heading, most solid, and most uniform strain of Big Boston Lettuce ever produced. It forms a very large frame and unlike most bulky Lettuces, it heads quickly and is extremely hard. For Spring and Fall use it has no superior. On account of its hardness and the tough character of the outer leaves, it cannot be surpassed for a shipping Lettuce. **Pkt. 10c., oz. 20c., $\frac{1}{4}$ lb. 50c., lb. \$1.50.**

Early Dighton Corn

Early Dighton Corn

(We believe this is the earliest real Sweet Corn yet produced.)

Some years ago one of our enterprising customers, near Boston, sent us a few ears of corn, claiming that the corn was fit for market seven days ahead of our Early Dawn, and our trials proved he told the truth. Ears nearly as large as Early Dawn, seven days earlier maturing. A real old-fashioned novelty. You all want some of this. **Pkt. 15c., qt. 40c., bu. \$10.00, 100 ears \$5.00.**

Webber, or Crackerjack Wax Beans

One of the earliest Wax Beans, of beautiful color, stringless; extra heavy yield, and a bean that we consider the finest variety we have for market gardeners for the early crop. Flat pod. **Pkt. 15c., lb. 40c., 100 lbs. \$18.00.**

Early Mayflower Corn

A wonderful early Corn. Will produce more ears than the Early Cory. The ears are larger, and are matured and fit for market within a few days of the Early Dawn. **Doz. ears 75c., qt. 40c., bu. \$8.00, 100 ears \$5.00.**

Golden Giant Corn

This, as the name implies, is a giant sized deep Golden Variety, fully double the size of Golden Bantam and still just as early and nearly as sweet; a big yielder and we recommend it highly. Have grown it now for the second year and it has made good. **Doz. ears 75c., qt. 50c., bu. \$10.00, 100 ears \$5.00.**

Golden Bantam Corn

Connecticut-grown Sweet Corn is the best in the world. Our strain of Golden Bantam is earlier than any other strain grown because it can be planted earlier. It is in great demand in every market on account of its wonderfully sweet flavor. It is the biggest yielder of all early Sweet Corn and commands nearly double the price in any market. **Doz. ears 75c., qt. 40c., bu. \$8.00, 100 ears \$5.00.**

Early Jersey Wakefield Cabbage

PRIZE STRAIN

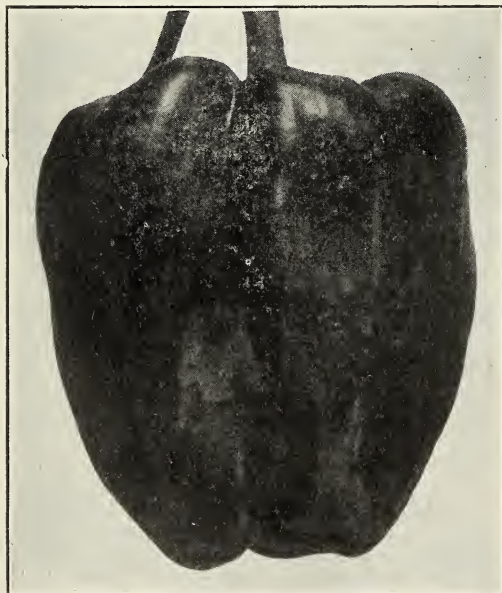

After years of selection, we have produced a stock of this best of all early pointed Cabbage which meets with our absolute approval. This is the first year we have put this selected strain on the market, and we look for wonderful results. The plant is very robust, and stands more cold than any other. There are few outer leaves, and the head is very pointed and extremely solid. The beauty of this selected strain is that it will head uniformly and at the same time, so that in a very few cuttings you will clean your patch. **Pkt. 10c., oz. 40c., $\frac{1}{4}$ lb. \$1.00, lb. \$3.50.**

Copenhagen Market
Cabbage

Charleston Wakefield Cabbage

Our strain of Charleston Wakefield is larger and a little later than Early Jersey Wakefield. Leaves rather large, smooth and comparatively thick. Very hardy and on account of its earliness and size is deservedly a very popular sort to follow Jersey Wakefield. **Pkt. 10c., oz. 40c., $\frac{1}{4}$ lb. \$1.00, lb. \$4.00.**

Ruby King Pepper

Copenhagen Market Cabbage

This Cabbage, from the Island of Amagar, is ready for market earlier than the Charleston and nearly as early as our superb Jersey Wakefield. It is the surest heading variety in existence; as heavy and as hard as many of the late round or flat heads, often reaching a weight of seven pounds. It is a deep head, of the Danish Ballhead type, and, therefore, can be planted thicker than most varieties. **Pkt. 10c., oz. 50c., $\frac{1}{4}$ lb. \$1.50, lb. \$5.00.**

Ruby King Pepper

This Pepper is one of the most popular, large fruited sorts. We have developed a strain which bears a large crop of ruby red fruits 5 to 6 inches long by 3 to 4 inches in diameter. The flesh of our strain is very thick and of a sweet, mild flavor. An excellent strain for market gardeners. **Pkt. 10c., oz. 40c., $\frac{1}{4}$ lb. \$1.50, lb. \$5.00.**

Burbank Tomato

This new introduction by Mr. Burbank we believe to be worthy of a trial by every one who wants the best thing in a good, early Tomato. **Pkt. 25c., $\frac{1}{4}$ oz. \$1.00. oz. \$2.50.**

The best Early Tomato according to Burbank. Try at least some of this. Supply very limited.

DWARF or BUSH BEANS

Culture.—Beans rot very easily in cold weather, so must not be planted until the ground is perfectly warm. Sow about the 1st of May in rows 2 inches deep and 18 inches apart; Beans 3 inches apart in the row. Hoe only in dry weather, as cultivation when the vines are wet will invariably produce rust. Sow every two weeks until August 1st. To keep the plants bearing continually pick the vines clean. One quart of Beans will plant a 100-foot row; $1\frac{1}{4}$ bushels to acre.

Culture.—Cabbage, to be well grown, requires a deep, rich loamy soil. For early use sow the seed in hotbeds in February or March, or it may be sown about the middle of September, and the plants wintered over in cold-frames. Transplant in Spring, as soon as the ground can be worked, in rows 2 feet apart, and the plants 18 inches to 2 feet apart, according to variety. For Winter use the seed should be sown in May, and the plants out in July.

CARROT

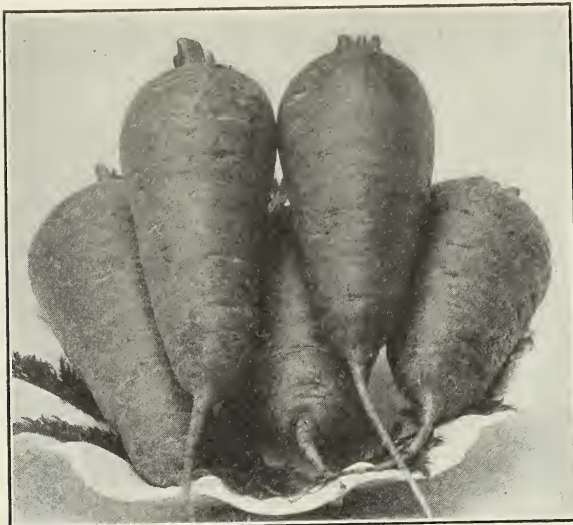

Culture.—For the best results the soil should be well worked to a good depth. For early use sow seed in rows 15 inches apart as early in the Spring as the soil can be worked, sowing about 4 lbs. of seed per acre; and cover the same with $\frac{1}{2}$ inch of soil; but for main crop sow about Corn planting time, using 3 lbs. of seed per acre, and the seed should be covered with nearly an inch of soil. One ounce of seed will sow 100 feet of drill. Keep free from weeds and cultivate occasionally until the roots are large enough for table use; and if grown for commercial purposes they may be cultivated with profit throughout the season. When the plants are 3 inches high thin to 3 inches apart in the row.

Lettuce, Select Big Boston

LETTUCE

Culture.—For very best results sow the Lettuce in rows just as you always do, but when it is up and making the second set of leaves, transplant it to about 4 to 6 inches apart in the rows. Did you ever realize that when you sow Lettuce so very thick in the row that you are getting poor quality Lettuce and only about one-tenth the quantity to the row that you should have. By transplanting, the plants will make immense, tender leaves of good quality, and the headed varieties will often head, making solid heads weighing one pound or more. Give them plenty of room, and they will well repay you for the little time and trouble you take in transplanting. Try it out on a small scale, anyway, and see if we are not right.

We strive to give you in our catalogue nothing bordering on self praise, but we cannot but say a few words about our stock of these strains of Connecticut Globe Onions. These Onions have been bred and raised in Connecticut longer than any other stock and few seed dealers have had more trade in this line than our firm. S. D. Woodruff & Sons, Orange, Conn.,

Gentlemen:—My best acre of Yellow Globe Onions, raised from your seeds, went 834 bushels, against 704 bushels on an acre from seed from another dealer, in soil side by side. The best acre of your Red Globe Seed went 724 bushels; from six acres of your Red Globe and Yellow Globe Seed, they averaged 675 bushels per acre.

Yours respectfully,
L. H. WIGHT.

Needless to say, Mr. L. H. Wight, Bradstreet, Mass., was pretty well pleased with our stocks of Red and Yellow Globe Onions. A large number of Mr. Wight's neighbors had similar results and we have orders from Mr. Wight and dozens of his neighbors for their supply of seeds.

We devote one page of our catalogue to Onion Sets. Of all the market garden crops probably this one is most likely to show a large and quick return to the producer. Only one year in the past twenty have the Onion Set gardeners failed to reap a large return from their plantings of Onion Sets. Whether North or South, East or West, the market gardener will do well to investigate his chances of profit with this crop. Our advice to you is to at least attempt the crop in your business for this year. The sets are reasonable in price. The returns come early in the season when money is most needed, you have plenty of time for almost any second crop after your crop of Sets have been turned into money.

Write for special prices if you plant large quantities of Sets

We Are Headquarters in the East for Choice Sets

Culture.—Place the Onion Sets 3 to 4 inches apart, according to size, 2 inches deep, in rows 1 foot apart. Furrow out the soil with a hand plow, and set the Onion in this furrow right side up and cover firmly. Twelve to fifteen bushels Sets required per acre.

WHY ONION SETS ARE PLANTED

Onion Sets produce bulbs in one-half the time that is required in raising from seed, thus enabling the planter to get the highest market price for his early Onions.

No crop the farmer puts in the ground is surer to return a profitable crop than a crop of Onion Sets. If you set good, sound Sets and give them good soil and good culture, a fairly good crop is assured. Markets for past two or three years have been good, and in almost every case crop has been a money maker.

YELLOW ONION SETS

RED ONION SETS

Lb. 25c., 100 lbs. \$8.00.

When it comes to Onion Seed and Onion Sets we believe we can do just a little better for you than you can do elsewhere, whether you need a pound or ten thousand pounds.

RADISHES

Our strains of all varieties of Radish Seeds are grown from selected stock seed. They are true to name and will please you. Radishes are a very profitable crop for the market gardener. They will stand considerable cool weather, and can be planted early; will make a crop in 25 to 30 days, so that other crops may be planted on the ground after the Radishes are marketed.

Culture.—Sow the seed in the open ground as soon as danger of hard frosts is over, or in coldframes whenever space is available. In order to be crisp, tender and sweet, Radishes should grow rapidly and should not be sown on wet or heavy soils. Plow or spade the ground deeply. Use plenty of commercial fertilizer, thoroughly harrowing or raking it into the soil. Sow thinly in rows 12 to 14 inches apart, covering the seed one-half inch deep. Keep the soil well cultivated.

SPINACH

Culture.—Sow in early Spring, in drills a foot apart (10 to 12 lbs. to the acre), every two weeks for a succession and, as it grows, thin out for use. For Fall use sow in August, and for Winter crop in September. Cover that which is left out over Winter with straw or leaves after the weather becomes quite cold. Keep clear of weeds. Sow the seeds of New Zealand in hills 2 feet apart each way, 3 or 4 seeds in a hill.

We are headquarters on Spinach Seed, and supply annually the most critical customers.

Buying as we do in such large quantities, we are enabled to sell at correspondingly low figures.

We offer the following standard varieties, all of very best stocks, at the following uniform prices: Oz. 10c., $\frac{1}{4}$ lb. 20c., lb. 40c., 10-lb. lots at 30c. per lb.

NEW ZEALAND. While not of the Spinach family, it is very popular because it produces an abundance of foliage. It is of vigorous growth, producing leaves throughout the entire Summer, and is in no way affected by heat. Do not plant until the first of May, as this variety is very susceptible to cold. It is especially popular in the South since it endures heat. Pkt. 5c., oz. 15c., $\frac{1}{4}$ lb. 35c., lb. \$1.00.

BLOOMSDALE SAVOY. This popular variety is mostly sown for late Fall cutting. It is very quick growing and a very heavy cropper, producing large dark green leaves. On account of the very heavy demand for this variety we have it growing in America as well as abroad. We offer the new crop seed for shipment August 15th to 20th. Oz. 10c., $\frac{1}{4}$ lb. 25c., lb. 40c., 10 lbs. or over at 30c. per lb.

ROUND THICK LEAF. One of the very best sorts for early Spring and Fall sowing. It produces large, thick leaves, bright green in color, is a very heavy cropper and is one of the best for market gardeners' use.

GIANT, or MONSTROUS VIROFLAY. This variety is of quick, vigorous growth and is known as New York's favorite.

Spinach, Monstrous Viroflay

LONG STANDING. Of very compact growth with thick, dark green leaves. This variety is in every way the equal of Savoy.

NEW VICTORIA. Leaves have an extra dark black-green color. A very fine variety for Spring sowing. It will stand even longer than Long Standing before throwing a seed stalk. Another market gardeners' favorite.

LONG SEASON, or TRIUMPH. We have perfected this strain of Spinach and our trial ground tests prove that this Spinach will, after it attains its growth, stay in that condition much longer than any other Spinach listed. This fact makes it an ideal type for a Summer crop, as it can be harvested and used when all other varieties will go to seed. The plants are short and compact with thick, broad leaves.

GAUDRY ROUND SEED. Splendid new round, thick leaf sort; an immense sized plant and cropper. We urge our largest truckers to try this variety.

SQUASH

Culture.—Sow in hills in the same manner and at the same time as Cucumber and Melons. The Bush varieties 3 to 4 feet apart; the running kinds 6 to 9 feet apart.

Cut them when not quite in full bloom and hang in a shady place to dry. Pack away in box entirely excluded from the air. (See page 6.)

Turnips are generally sown broadcast, but much larger crops are obtained (particularly of the Ruta Bagas) by cultivating in drills 18 inches apart, and thinning to 6 inches in the drill. Sow in drills, one pound to the acre; broadcast, 2 to 3 pounds to the acre.

FARM SEEDS

BUCKWHEAT

This wonderful and valuable new forage plant was introduced in this country by Professor Brooks of the Massachusetts Agricultural Experiment Station. It has proved an enormous yielder in all sections of the United States where tried—hay and fodder of the most excellent quality growing on any soil, yielding 12 to 20 tons per acre, and growing 5 to 8 feet in height. Cattle and horses eat it greedily. Sow in May and June broadcast, 20 to 32 lbs. per acre, or in drills 20 lbs. per acre. Lb. 20c. (by mail postpaid, lb. 25c.), 10 lbs. \$2.00, 100 lbs. \$12.00, by freight or express.

FIELD, or COW PEAS

THE GREAT SOIL IMPROVER

Makes poor land rich—makes good land more productive—also makes a splendid and nutritious green forage or hay crop, enriching the soil even when the

WOODRUFF'S HOME MIXED FERTILIZERS

We have mixed our own fertilizer for use on our extensive seed farms for the past few years and cannot too strongly recommend this method of buying fertilizers. The successful results we have obtained from using WOODRUFF'S HOME MIXTURE on our farms has induced us to offer these goods at a reasonable price to the dozens of our customers who quickly see the extra value offered. The fertilizer we offer is in every respect the same as we use on our own extensive seed farms, is made from strictly high-grade chemicals and mixed by ourselves. We buy these chemicals in 50 to 100-ton lots for spot cash, and by so doing we are enabled to sell a strictly high-grade fertilizer at a much lower price than the same quality can be purchased from manufacturers of ready-mixed fertilizers.

We call special attention to any report of the Connecticut Agricultural Experiment Station for the past five years.

We offer the following formula:

Ammonia.....4%	} Spot cash price,	Per 100 lbs.....\$3.00
Available Phos. Acid.9%		\$48.00 per ton,
Potash.....4%		Per 500 lbs.....14.00
	F. O. B. Orange, Ct.	

If you compare this formula at this price with any standard goods, you will be able to judge of the great saving in price by using our Home Mixture. Owing to increased cost of chemicals we are obliged to raise our price.

Prices subject to change.

We offer the following high-grade chemicals, F. O. B. cars, Orange, Conn., to those who wish to mix their own fertilizer; we recommend, however, our customers to use our HOME MIXTURE, as our facilities for handling and mixing are such that we do it at a minimum cost.

Nitrate of Soda in original bags, about 225 lbs. each, at \$3.50 per 100 lbs.

Animal Tankage, guaranteed.....{ 8% Ammonia..... } at \$3.00 per 100 lbs.
 { 25% Bone Phosphate of Lime }

Acid Phosphate, guaranteed 16% available Phosphoric Acid, at \$1.50 per 100 lbs.

All the above prices are for cash with order or before shipment. These offerings will not appeal to the planter who expects eight months' or one year's time in which to pay for his fertilizer, but for the buyer who can pay cash we believe they will be attractive. We can almost always ship on the day the order is received.
